

Surgical Boom & Light Mounting Solutions for Every Application.

Healthcare Technology Corporation (HTC) is the leading supplier of pre-engineered and prefabricated overhead surgical boom and light mounting solutions. Our systems safely and easily attach state-of-the-art medical equipment such as surgical and exam lights, microscopes, monitors, cameras, equipment management systems and anesthesia booms to an overhead building structure.

Accu-Mount Series 100

Designed for Exam & Procedure Lighting, Microscopes, Cameras, Injectors and Navigation Equipment.

Accu-Mount Series 200

Designed for Single or Multiple Head Surgical Lights and Monitor Equipment.

Accu-Mount Series 300

Designed for Anesthesia Booms, Equipment Management Systems and Tandem Configurations.

Accu-Mount Series 100

The 100 Series System is designed for smaller loads such as exam and procedure lights, injectors, and navigation equipment. This system uses our engineered Accu-Spar tube support frame as the main mast support assembly. We integrated a specially designed floating base assembly with the Accu-Spar mast, which allows you to easily adjust the field height. The sway braces if required can also be easily adjusted to accommodate congested ceilings.

- ✓ *Injectors*
- ✓ *Navigation Equipment*

Accu-Mount Series 200

The 200 Series System is designed for surgical lights and monitor equipment. We supply the mounts with an adjustable base plate, which allows for field height adjustability and easy on site leveling. To help with installation and material staging we can ship the mount fully assembled or in kit form. When required, header mount arrangements can be supplied for steel frame, steel joist and pan joist building structures. Field welding and on site fabrication will not be required.

- ✓ *Surgical Lights*
- ✓ *Monitor Equipment*

Accu-Mount Series 300

The 300 Series System is designed for high moment generating equipment such as anesthesia booms, equipment management systems and tandem configurations. We supply the mounts with an adjustable base plate which allows for field height adjustability as well as, rotational adjustability to help with ceiling grid alignment. Header mount arrangements can be supplied for steel frame, steel joist and pan joist building structures. Field welding and on site fabrication will not be required.

Accu-MOUNT

support systems

Throughout my 10 years at Stryker Communications, I've had the pleasure of working with HTC on many occasions. In every case, their knowledge and professionalism is without question, the best I've ever worked with.

– John Michaelides
Territory Manager
Stryker

HTC has been a great member of our collaborative Project Team. Their supports provide "lean" design which provided for an efficient installation for our field crews. The supports are designed to allow for minimal ceiling space in highly congested MEP installation areas such as OR's, ED Exam Rooms, Procedure Rooms, etc.

– Joshua Christensen
Project Manager II
Boldt

This is my second project with HTC and it has been good working with them. Because of the planning/coordination, Turner & HTC were able to come up with a solution to mount the Med Gas manifold serving the Stryker Booms directly to the Accu-Mount Support System. The client, UK Healthcare, was extremely pleased with the end results.

– Chad Denny
Superintendent &
LEED Green Associate
Turner Construction Company

HTC has a great product with their Accu-Mount Support Systems. Steve Strobridge and his team are great to work with. They're knowledgeable, they listen and they invest all of their time and effort into a project from start to finish.

– Judy O. Pelfrey
